Education

Vellore Institute of Technology, Bhopal

Bachelor of Technology (B.Tech), Computer Science

CGPA: 9.04 / 10.0

Expected May 2027

Experience

Python Backend Developer Intern – Meslova Systems Pvt. Ltd.

May 2026 – Jul 2026

Tech Stack: Python, Django, DRF, PostgreSQL, Whisper, PyAnnote

Hyderabad, India

- Architected and built the core backend for a B2B recruitment/ATS platform, powering role-based portals for recruiters, HR, and admins with 15+ REST APIs, token auth, and RBAC.
- Engineered candidate screening workflows – resume parsing, ATS scoring, search/filtering, pipeline tracking, and activity logs – over an 8+ table PostgreSQL schema with indexed queries.
- Contributed to an audio-analytics pipeline using Whisper and PyAnnote for speaker-wise call diarization, enabling downstream sentiment and hiring-signal extraction.

Backend Developer Intern – Saurabhi Media Pvt. Ltd.

Apr 2026 – May 2026

Tech Stack: Python, SQL

Delhi, India

- Built a Python-based ETL and data-validation pipeline to parse, clean, and load large-volume CSV datasets into a relational database, ensuring data quality and analysis-readiness for downstream reporting.
- Automated real-time data ingestion via a watch-folder service, eliminating manual data-entry effort and enabling near real-time data availability for analysis.
- Designed modular, idempotent pipeline stages with error handling, logging, and data-quality checks, supporting reliable, audit-ready data processing at scale.

Projects

HireMind – AI-Powered Applicant Tracking System [GitHub]

Django, DRF, React, PostgreSQL, OpenAI API

- Architected a full-scale ATS from scratch, independently designing a normalized schema across 8+ entities and 15+ secure REST endpoints (token auth, RBAC) with a clean service-layer architecture supporting end-to-end recruiter and candidate workflows.
- Engineered an LLM-driven resume-parsing and candidate-ranking pipeline on the OpenAI API, automatically scoring 1,000+ resumes against job requirements with structured relevance metrics, cutting manual shortlisting effort.
- Built a funnel analytics layer giving recruiters real-time, stage-wise visibility into candidate pipelines, turning raw applicant data into actionable hiring insights.

AyuSetu – Clinical Appointment & Follow-up Platform [GitHub]

Python, Django, DRF, PostgreSQL, React, Tailwind CSS, Gemini API

- Designed concurrency-safe booking with `select_for_update()` locking, a partial unique index, and 5-minute slot holds, preventing double-booking.
- Built asynchronous AI triage, post-visit summaries, and notifications using Django-Q2 with a layered service architecture.
- Integrated Google Calendar OAuth 2.0 to sync doctor schedules, shifts, and leave, with auto-cancellation of conflicts; covered by 31 automated tests.

Financial Transaction Anomaly Detection & Audit Analytics Dashboard [GitHub]

SQL, Python, Pandas, Power BI

- Analyzed 100K+ financial transactions using SQL to identify duplicate invoices, unusual transaction amounts, missing records, and other potential audit anomalies.
- Built CTEs, joins, aggregations, CASE expressions, and window functions to perform transaction profiling and risk analysis.
- Used Python/Pandas for data cleaning, exploratory analysis, outlier detection, and statistical analysis of transaction patterns.
- Developed an interactive Power BI dashboard with KPIs, spending trends, vendor analysis, department-level insights, and high-risk transaction indicators.

Technical Skills

Languages	Python, C++, SQL
Data & Analytics	Pandas, NumPy, Excel, Power BI, Tableau
Backend	Django, Django REST Framework (DRF)
Frontend	React.js, Tailwind CSS, Bootstrap
Databases	PostgreSQL, MySQL
Tools	Git, GitHub, Postman

Achievements

- Top 20 finalist out of 200+ teams, Cyber for HER Hackathon (DSCI, with EY and Rubrik)
- Finalist, Smart India Hackathon (SIH)
- 2nd place, E-commerce Payment Integration Competition (Linpack Club) – secure Razorpay integration
- Campus Ambassador, E-Cell IIT Bombay – led a team of 25 members
